Professional Summary

Results-driven Full Stack Developer with 4+ years of hands-on experience architecting and delivering scalable, high-performance web applications across the full development stack.

Proficient in modern JavaScript ecosystems including **React.js**, **Next.js**, **Node.js**, and **TypeScript**, with a strong foundation in relational databases and cloud-backed services. Adept at translating complex business requirements into clean, maintainable code and intuitive user experiences.

Proven ability to own projects end-to-end — from architecture decisions and API design to responsive UI implementation and deployment. Equally comfortable collaborating within agile teams and delivering independently for freelance clients. Committed to writing production-quality code, optimizing performance, and building products users trust.

- ① Open to full-time roles, contract positions, and high-impact freelance engagements at technology-driven organizations.

Technical Skills

A curated stack of modern, industry-standard technologies — selected for performance, scalability, and developer experience.

Frontend

- HTML5 & CSS3
- JavaScript (ES2022+)
- TypeScript
- React.js
- Next.js (App Router)

UI & Styling

- Tailwind CSS
- ShadCN UI
- Bootstrap 5
- Responsive Design
- Accessibility (WCAG)

Backend & Database

- Node.js
- Express.js
- PostgreSQL
- Supabase
- REST API Design

Tools & Workflow

- Git & GitHub
- VS Code
- Vercel / Netlify
- Postman
- Agile / Scrum

Core Competencies

Full Stack Architecture

Designing scalable systems with clean separation of concerns, optimized API layers, and maintainable codebases from day one.

Backend & API Development

Building robust RESTful APIs with Node.js and Express, backed by PostgreSQL and Supabase for real-time, reliable data handling.

Responsive UI Engineering

Crafting pixel-perfect, accessible interfaces that perform flawlessly across devices, browsers, and screen sizes.

Performance Optimization

Applying modern techniques — code splitting, lazy loading, SSR/SSG with Next.js — to deliver fast, production-grade applications.

Featured Projects

Three real-world applications demonstrating end-to-end ownership, technical depth, and product thinking across diverse domains.

Fees Management System

Project Overview

Engineered a full-featured, web-based fee management platform designed to modernize financial administration for educational institutions. The system handles the complete lifecycle of student fee processing — from enrollment records to real-time payment tracking.

Key Deliverables

- Centralized student records with search, filter, and profile management
- Automated fee schedule generation and deadline tracking
- Secure payment management with transaction history and receipts
- Admin dashboard with role-based access control and analytics
- Fully responsive UI built with React.js and Tailwind CSS

Tech Stack

React.js

Next.js

TypeScript

Node.js

PostgreSQL

Tailwind CSS

Highlights

- Scalable architecture supporting multi-institution deployments
- Optimized queries reducing data load time by 40%
- Mobile-first responsive design

Northern Star Parenting

Tech Stack

Next.js

TypeScript

Tailwind CSS

ShadCN UI

Supabase

Impact Metrics

- Lighthouse performance score: 95+
- WCAG 2.1 AA accessibility compliant
- Core Web Vitals optimized

Project Overview

Developed a modern digital parenting platform with a strong emphasis on clean UI/UX design, content accessibility, and cross-device performance. The platform serves parents seeking structured guidance and community resources through an intuitive, welcoming interface.

Key Deliverables

- Designed and implemented a responsive, component-driven frontend using Next.js and ShadCN UI
- Optimized page load performance via SSG and image optimization pipelines
- Integrated Supabase for real-time content management and user data
- Enforced WCAG accessibility standards throughout the UI layer
- Delivered smooth, intuitive navigation patterns for a non-technical audience

Gosawari Carpooling

Project Overview

Architected and delivered a full stack carpooling web application designed for real-world urban mobility. Gosawari enables drivers and passengers to connect, book rides, and manage trips through a seamless, modern interface — combining the complexity of a marketplace with consumer-grade simplicity.

Key Deliverables

- Dynamic ride listing system with real-time availability and filtering
- Secure user authentication and profile management via Supabase Auth
- End-to-end booking flow with confirmation, status tracking, and notifications
- Fully responsive design optimized for mobile-first usage patterns
- Scalable Express.js backend with PostgreSQL relational data modeling

Tech Stack

React.js

Next.js

Node.js

Express.js

PostgreSQL

Supabase

Tailwind CSS

TypeScript

✓ Production-ready architecture designed for horizontal scalability and real-world user load.
